NEXT GENERAL MEETING
JULY 21, 2010
MISSION VALLEY RESORT
875 HOTEL CIRCLE SO.

JULY

SAN DIEGO CHAPTER MONTHLY NEWSLETTER

2010

President's Message

It is amazing how fast this year seems to be flying by. The weather has remained mild for the most part. Maybe that's why it seems surprising that it is mid July already. Walk outside and it feels like April. Certainly these cooler temperatures help keep the overhead down. Speaking of mid July, the chapter has a couple of important events this month that shouldn't be missed. The general meeting on Wednesday the 21st will feature Lance Sada as the guest speaker. Lance is a Certified Pool Operator; he is the IPSSA Liaison to the National Plasterers Council, the IPSSA Liaison to the National Pool Industry Research Center, a Member of the California Polytechnic State University's Advisory Board overseeing the National Pool Industry Research Center, a Member of the National Plasterers Council Research Committee, a Member of the National Plasterers Council Technical Advisory Committee, a Member of the Taskforce for the National Plasterers Council Pool Start Up Certification Program, and last but certainly not the least, he is the President of the Menifee Valley IPSSA Chapter. He will be making a trip down to San Diego specifically to speak at our meeting this month. I encourage all of you, both members and Chapter Supporters, to be present for this very informative evening. Lance will fill us in on the latest information coming from the research being conducted at Cal Poly San Luis Obispo. He will answer questions throughout his presentation. Please make the effort to attend.

The following day, Thursday July 22nd, at 4:00 PM Greg Garrett will be conducting a seminar at the San Diego SCP location. Greg is the National Tech Advisor for the National Plasterers Council. He will focus his seminar on Interior Pool Finish

Discoloration, Causes and Cures. It will be an in depth presentation including many real world examples of discolored pools along with the solutions on how to bring the pool finish back to life and get paid for it as a pool professional. This seminar is worth two Continuing Education points. There is limited seating, so be sure to call and reserve your seat right away. The seminar is free and food will be provided. Call 858-467-9495. SCP is located at 5648 Copley Drive San Diego, CA. 92111.

The Chapter recently completed, successfully, a Sick Leave Coverage for one of its members. Thank you again to the Sick Leave Chairmen (Jim Hines, Ron Baker, Terry Wehrly, and Ron Magnant) who made sure the coverage was handled properly and took care of any unexpected problems that arose. Thank you again to the servicing members who took care of the pools out in the field. With over eighty pools that needed to be serviced, the challenge was great and once again the members rose to that challenge.

Hope to see you all on Wednesday and Thursday. Cheers, Mark

Thousands of public pools fail inspections

A report released by the Centers for Disease Control and Prevention (CDC) on May 20, 2010, shows 1 out of every 8 public pool inspections resulted in immediate pool closure due to serious health code violations. The report confirms the results of an earlier study that found a large number of community pools in the US do not sufficiently protect the public from recreational water illnesses.

Public swimming pool code violations

The newly released CDC report contains data gathered from a sampling of 121,020 swimming pool inspections conducted in 13 states. A total of 13,532 of the inspections resulted in immediate closing of the pool due to serious code violations. The most common violations involved improper amounts of disinfectant and incorrect pH levels, both of which threaten the health of the public.

Pools at childcare facilities had the highest number of closures, followed by hotel pools, and apartment complex pools.

Swimming pools and recreational water illnesses

While swimming is a good way to exercise and enjoy family fun, it can also expose people to several types of water-borne illnesses, including infections that affect the gastrointestinal tract, respiratory system, skin, eyes, and ears. The most common symptom of reported recreational water illnesses is diarrhea.

Chlorine and other chemicals used in swimming pools kill germs and maintain a pH balance that discourages bacterial growth, but it takes time for these chemicals to work. Even in properly maintained pools, it takes anywhere from 1 minute to 10 days for chlorine to kill the various germs responsible for recreational water illnesses.

Blue Cards Due on or before July 21st

It's that time of the year again. Please send or give your completed, legible Blue Cards to Paul Grimes.

Your options are

- Mail via US Postal Service
San Diego Chapter IPSSA
PO Box 70192 SD CA 92107
Must be postmarked on or before July 21, 2010 or you will be fined.
- Bring to the July General meetings and hand to Paul Grimes at sign-in table.
- Avoid the \$50 fine by being on-time.
- Avoid potential fines and/or coverage issues by providing correct, legible and complete information on your card.

General Meeting June 16, 2010

Call to order: 7:15 PM
Pledge of Allegiance: Mike Gregg
Treasurer's Report- Jim Bauer: We're in good shape financially. See financial info included in this issue.

Secretary's Report- James Morketter: Board meeting minutes approved.

Vice-President's Report- Phil Gardiner: Phil introduced the evening's scheduled speakers.

Chapter supporters, manufacturer's rep's and supply house reps were brought to the front of the room. Present included: Derek Dalto, Kristal Cavender, Joey Chavez, Don Wall, Dave Ogren, Jim Talmich, Jim Byers

Prospective member Seth Rauscher was introduced to the meeting.

Paul Grimes thanked the membership for taking care of his pools during his recovery from surgery.

We received a certificate of appreciation from SPEC. This certificate is now on display at San Diego Superior.

Jon McArthur spoke briefly regarding continuing ed. He reminded everyone of upcoming seminars and trade shows where education points could be obtained.

Kristal Cavender from Son Energy spoke briefly.

Don Wall from The Pool Doctor spoke briefly.

Subject: Plaster Dust Can Be Prevented

Plaster Dust Should Be and Can Be Prevented, by onBalance June 2010

For over fifty years, most (if not all) builders, plasterers, and service techs have assumed that plaster dust (that often develops during the first two weeks after plastering) is normal, unavoidable, and acceptable. But recent research has shown that plaster dust should be and can be prevented.

Although plaster dust is normal (meaning that it is commonly seen in new plaster pools), it is not ideal (meaning that we can do better – that preventing plaster dust results in better plaster). What is plaster dust made of? It is formed from dissolved calcium from the new plaster surface. Therefore, by definition, if there is any plaster dust, there was a loss of material from the once-smooth and dense troweled plaster. And when material is lost from the surface, that surface is not as dense, smooth and durable as it once was, and as it could have remained.

Our research documents that three factors promote more plaster dust: poor plaster, filling a pool too soon, and aggressive fill water. Any one negative factor can produce plaster dust, and the more a factor is abused, or when multiple negative factors are present, the more dust is formed. This calcium loss means that the plaster is more rough (even though that may not be visible to the naked eye or by touch), more porous, and more susceptible to deterioration and staining as time passes.

We have also demonstrated through our research and through field demonstrations that strong plaster, sufficient time before filling, and appropriate fill water chemistry will prevent plaster dust formation – meaning more dense, smooth, protected pool surfaces.

In the concrete/cement industry, “dusting” of a concrete surface is known to be a sign of a weak and porous surface, and that improper workmanship practices lead to that condition. ACI and PCA literature cites high water/cement ratios, adding calcium chloride to the mix, adding water to a surface while troweling, and finishing during very hot and dry temperatures as factors leading to a weak surface, and dusting or efflorescence may result on cement flatwork.

Following that lead, through a series of recent experiments and studies, onBalance has identified certain improper practices for new pool plaster that will lead to having plaster dust develop as the pool is filling with water. The critical factors are as follows.

- A high water/cement ratio of the plaster mix
- Adding calcium chloride to the plaster mix
- Adding water and working it into the plaster surface while troweling
- Plastering in extreme temperatures (hot and dry, or very cold)
- Starting and filling the pool with water too soon
- Aggressive tap water (any water that has a negative Saturation Index)

Plastering Practices – when plastering, the following steps are recommended; use a low water/cement ratio, limit calcium chloride additions to 1% or less to the weight of cement, decrease or avoid calcium chloride use as ambient temperatures rise, do not trowel water back into the plaster surface, avoid overly late hard troweling, and plaster in moderate temperatures (or tent the pool).

Fill Delay – allow the plaster to harden for at least 6 hours before submerging in water. (More time may be needed for certain environmental conditions.)

Fill Water Chemistry – ensure that positive saturation water is used for filling (+0.5 is recommended with a pH under 8.2). The “Bicarb Startup” process is the ideal pre-treatment chemical startup procedure, which creates positive saturation water.

By following the above recommendations, virtually no plaster dust will result and the calcium level of the pool water won't increase. The balancing of the pool water afterwards will be much easier, the pool filters won't get clogged up with scale, and even dark colored plaster jobs stay dark and don't lighten or whiten in color.

Greg Garrett and Randy Dukes, members and consultants for the NPC, suggest that when aggressive tap water is used to fill a pool; it needs to be balanced after the pool is full of water. No, that is too late; balancing of the aggressive tap water needs to be done before it is used to fill the pool. Essentially, it is being suggested that aggressive tap water doesn't start dissolving calcium from a plaster surface until several days after the pool is filled. The fact is that by the time the pool is full of water, the original (aggressive) tap water has already changed in its composition (during filling) and may be balanced; because that is what aggressive water will do, especially in contact with new plaster. The aggressive tap water immediately dissolves calcium and alkali off of the new plaster surface (producing plaster dust) within the first 24 hours, and thus, the damage has already been done! Very little bicarb or calcium may be needed for balancing by the time the service tech shows up at poolside.

Additionally, the NPC or their consultants have blamed low calcium or aggressive water for a myriad of ills, including gray darkened and blotchy plaster, white spotting, nodules, spalling, and who knows – maybe even birth defects in pool cleaners. The fact of the matter is that aggressive water causes mild etching – which slightly roughens and may lighten the surface somewhat, but not the problems mentioned above. They are improper workmanship and material issues.

The presence of plaster dust – even though it has become accepted as “normal” – is a primary indicator of a less-than-ideal pool surface. It may have become accepted as normal, but a pool that dusts is certainly not as good as it could be. For those who prefer producing a better than normal product, who pride themselves in doing their best, following ideal practices, and eliminating plaster dust is the goal. Proper plastering, adequate fill delay, and properly prepared fill water chemistry ensure that the pool owner will have a quality and durable pool plaster finish without discolorations.

I, the undersigned, waive any and all claims against IPSSA, Inc, IPSSA Management Company, IPSSA Chapters and/or its individual members, arising out of my participation in the IPSSA Sick Leave Program, including, but not limited to claims for lost income resulting from improper maintenance performed by IPSSA members. I have read and understand the standing rules for the Sick Leave Program and agree to participate in that program.
