MISSION VALLEY RESORT
875 HOTEL CIRCLE SO.

NOVEMBER

SAN DIEGO CHAPTER MONTHLY NEWSLETTER

2010

President's Message

Last month I wrote to you about the public's negative perception of the pool maintenance business. It seems as though one can't go anywhere in Southern California and not see a pickup truck drive by with a pool pole sticking out the back. Unfortunately, the majority of those trucks are being driven by people who are not licensed to do pool work, are not properly trained, are not insured, are not interested in becoming more knowledgeable, and have no interest in putting in the effort to become a true pool professional. When they are seen exiting their truck, one would wonder if they've recently escaped prison or maybe they just don't have running water where they live.

The point is that this is the image that is presented to the public far too many times. Can these people be reached and convinced to clean up their act? Probably not, however the true pool professional can leave them in the dust quite easily, simply by not compromising. Remember to keep necessary licenses current, maintain insurance, and attend seminars to stay up to date with the latest technology. Drive a clean well maintained vehicle, shower and shave before starting the day, wear some semblance of a uniform, give evidence of being a professional, or at least portray an effort of being a pro.

These are difficult times for everyone in this Country. Yes the public is looking for a bargain when they can find it. But at the same time the public is starving for good customer service and is willing to pay for it. That is what a pool professional should provide; expert service to the pool and pool equipment and excellent customer service. Be accessible to the customers, communicate with enthusiasm, give the impression that the work is enjoyable, and respond quickly to customers' needs.

As each year passes the cost of doing business continues to rise. The price of all the chemicals used to maintain a pool have risen dramatically, the price for the equipment used to service a pool has risen substantially, the price for gasoline, insurance, etc., it all continues to increase. So why would one consider lowering their service charge when everything required to run a business continues to get more expensive? Improve the professionalism and the image of the industry and separate oneself from the rest who don't care, continue to charge more for the services being provided. The public is craving great, reliable and honest service.

Compare the pool repair business with the appliance repair business as an example. When an appliance repairman is called out to work on a washer, dryer, dishwasher, or a refrigerator; a service call of \$100 to \$125 is charged simply to ring the door bell. Sometimes the charge will include the first half hour of labor, but it will be a \$100 an hour or more charge for the time necessary to complete the repair. The costs of any parts that are needed are typically doubled prior to charging the customer. The appliances being repaired are necessity items that range in price from \$500 to \$4000.

Now look at what the pool professional is asked to maintain and repair; a swimming pool and spa that cost \$50,000 to \$150,000 or more to construct, sophisticated computer controlled equipment, proper water chemistry to insure that the body of water can be entered safely, proper water chemistry to prolong the life of the pool and the pool equipment, and child safety and drowning prevention concerns. A pool professional should be charging more than an appliance repairman, but are they? They are if they've elevated their way of doing business to include integrity, enthusiasm, expertise, a clean image, and a willingness to learn.
Cheers, Mark

SPEC Partners with other Contractor Associations

Addressing Underground Economy
SPEC and other contractor organizations seek to work together to address legislative and regulatory changes to attack the underground economy.

On September 28, 2010, the Contractors State License Board (CSLB) called a meeting of interested contractor associations and state agencies to discuss how to develop better solutions to attack the underground economy by partnering resources and information. At this meeting associations were asked to identify solutions that the industry could contribute to a consortium focused on the goal of enforcement. To this end, SPEC attended a follow-up meeting on October 28th with other contractor associations, including:

- California Professional Association of Specialty Contractors
- California Sign Association
- California Landscape Contractors Association
- California Fence Contractors Association
- California Association of Sheet Metal and Air Conditioning
- Contractors National Association
- National Pool Plasterers Council

The purpose of this meeting was to share what each association was doing to address the underground economy and to see if joint regulatory and legislative efforts could further the campaign against non-compliant contractors. "The associations want to develop three or four legislative proposals that all contractor associations can support to attack the underground economy," indicated John Norwood, President of SPEC. "If all of these associations work together with the CSLB, District Attorneys Association, Employment Development Department, California Department of Insurance and local building officials, I think we can raise the issue to a priority level in the California Legislature." Another meeting is scheduled for November where the associations will focus on developing joint legislative and regulatory proposals to sponsor in the 2011 legislative session.

The associations plan to encourage the Senate Labor & Industrial Relations Committee and the Assembly Labor & Employment Committee to hold informational hearings on the issue of the underground economy, efforts by various state agencies to confront the problem, and changes in California laws that could make enforcement easier and more effective. In addition, the associations have discussed conducting a joint legislative day in Sacramento in early 2011, as well as hiring a public relations firm to help raise the profile of this issue with the public and among legislators, the new Governor and various enforcement agencies. "We look forward to developing new tools for enforcement agencies to use in the attack against this plague on our industry and are anxious to be active participants in this coalition effort," concluded Norwood.

Continuing to focus on the underground economy is a high priority issue for SPEC," stated Mike Geremia, President of Geremia Pools in Sacramento and Chairman of SPEC's Board of Governors. "And it is paying off. The CSLB's recent 2-day sting operation focused on the swimming pool industry and garnered 111 unlicensed contractors operating in Fresno, **La Mesa**, Pasadena, Placerville, Portersville, San Juan Capistrano, Seaside, Visalia, and West Sacramento. We commend the CSLB for its initiative in this area," Geremia concluded.

Looking for someone to install or repair your customers' pool solar system?

SunChaser, Inc. can help you.

- ⊗ Service and repair all brands
- ⊗ Install new systems
- ⊗ Troubleshooting
- ⊗ Equipment installation (including variable speed pumps) and automation
- ⊗ Referral fees paid
- ⊗ Dedicated to providing your customers with quality service
- ⊗ Also install domestic hot water and photovoltaic systems

Call Brandon Chase, President

General Meeting

October 20, 2010, Mandatory

Call to order: 7:10 PM

Pledge of allegiance: Mike Gregg
Greeters were recognized

Mark Curran acknowledged the standing rules committee- Mike Gregg, Jon McArthur, Jim Bradbury, Bill Peck, Paul Grimes.

Treasurer's report- Jim Bauer: We're in great shape financially.

Secretary's report- James Morketter: October board meeting minutes were approved.

Vice-President's report- Phil Gardiner: We have 32 chapter supporters this year, up 2 from last year.

Chapter supporters etc., were called to the front of the room. Present included: Reed Chastang, Gabe Gurmilan, Matt Myers, Ken Isler, Dave Ogren, Marc Dunn, Matt Castillo, Regina Rakowski, Morgan Burdick, Don Wall, Joey Chavez, Gil Khoury, Tom Cox, Tony Ruf, Kirk Chapman, Tom Gharib, Krystal Cavender, Mark R. Lane, Krista Hudson, Katina Curran, Mike Gersch, Mary-Ann Downing, Peter Gozdeck, Kevin Wallace.

Potential new members Seth Rauscher and Josh Stevens were present at the meeting.

We voted to remove David Lipe's membership status. He had been voted into membership pending completion of requirements. As of this meeting he has not met all of the requirements to join.

A card was circulated for Al Daugerty, who is dying from cancer. Al was our first

chapter president in 1976.

Peat Burke gave a presentation on pool service history. He showed us some vintage equipment also.

Our subscription to Service Industry News will continue for all active members.

Mark informed us that the Consumer Product Safety Commission (CPSC) now considers vacation rentals as public pools, and therefore under the requirements of the VGB Safety act.

A reminder was given that info on contacting Transworld services is located in the back section of the Ipsan Newspaper.

We were strongly reminded not to use un-licensed sub-contractors.

This year's Christmas party will be on December 4 at Admiral Baker golf course. Nobby Mandolf was recognized as our 2010 B.K. Taylor winner with a plaque and a check for \$500.

Nobby is also the Region 7 B.K. Taylor winner.

Mark spoke briefly about David Courey before soliciting nominees for the David Courey memorial award.

Jon McArthur nominated PS2000.
Phil Gardiner nominated Don Wall, The Pool Doctor.

John Silcox nominated Tony Ruf, Brite Tile.

The winner, by vote, was Don Wall.

Clint Jenkins and Mark Fleming were recognized. Mark spoke briefly, thanking members for taking care of his pools.

The updated standing rules were ratified

Easy Extra Cash & Keep Your Customers Happy - **Why Not!**
Recommend a Suntek Solar Pool Heating System Today!

- 19 years in manufacturing and installing our patented solar pool heater systems
- Over 20,000 satisfied customers
- Suntek collectors rated among highest ever tested (1024 BTU/Sq ft)
- Flexible custom made collectors can be installed anywhere that gets direct sun
- 15 year limited warranty unsurpassed in solar industry
- Made in the USA
- Extends your customer's swim season increasing the value of their pool

Generate additional income by recommending Suntek solar hot water and solar electricity systems

With Suntek you can be confident your customers will be satisfied!

CALL TODAY! 760-317-6722

by a vote.

Raffle:

\$150 John Rumble

\$25 Pat Shultheis

50# tabs Mike Walters

\$50 gas card Tom Sweeney

5 cases chlorine Joe Dudas

5 cases chlorine Richard Hayes

Meeting adjourned 8:30 PM.

Board Meeting Oct. 6, 2010

Mark Curran, Phil Gardiner, James Morketter

Call to order 7:30 PM

We discussed composing a generic fine letter to be used as a guide for future boards. This would help eliminate confusion and inconsistencies. A simple letter was drafted and reviewed.

Our Christmas party will have 4 blackjack tables, 1 roulette wheel, 2 craps tables and 2 Texas hold 'em tables.

We reviewed Bill Peck's email regarding limits on new members. We recommended the following:

- A six month time limit to meet all requirements
- Returning members must pass the water chemistry exam

We reviewed the list of members who will be fined for non-attendance at the October mandatory meeting.

We discussed possible speakers for the November general meeting.

Meeting adjourned 8:40 PM.

Calendar

11/17 General Meeting 7pm

Subject: NPC Rejects APSP Standard

Are you aware that the National Plasterers Council (NPC) has rejected APSP's long-time Saturation Index (SI) standard of -0.3 to +0.5 for water balance? The NPC decreed in 2008 that pool water must be maintained within a Saturation Index (SI) range of 0.0 and +0.3. Negative index values are not allowed.

Interestingly, the NPC claims that they include other industry groups for input and consensus, yet, as far as we know, the NPC did not receive agreement from the APSP Recreational Water Quality committee (RWQ), APSP's Technical committee, APSP's Service Council, or pool service associations such as IPSSA and the UPA.

The NPC has also stated that they would "abide by the results obtained" from the research performed by the NPIRC at Cal Poly before policy changes are made. Yet, the NPIRC studies have not proven this new position of the NPC.

This type of thing also happened in 2003 when the NPC made changes to their Technical Manual, blaming improper water chemistry for several different plaster defects. Several pool industry members (including IPSSA) asked the NPC for supporting evidence for the Tech manual changes. The NPC did not provide any documentation.

When balancing water, is it not reasonable to allow for occasional negative indices to offset maintaining pool water with a positive SI? Is it not reasonable to allow for occasional negative indices in hard water areas of the country, or where calcium hypochlorite or bleach is used for sanitizing? Where is the proof that an occasional and slightly negative Saturation Index is detrimental to pool plaster?

In addition to their decree on the SI standard, the NPC narrowed other water balance parameters for service techs to follow. Instead of adopting APSP's minimum and maximum values, the NPC wants to restrict all pool chemistry to only the ideal ranges – so instead of a calcium hardness standard of 150 to 1000 ppm, the NPC claims that 200 to 400 ppm of calcium hardness must be maintained. Instead of APSP's total alkalinity standard of 60 to 180 ppm, the NPC requires that alkalinity of 80 to 120 ppm be maintained, and it must be "carbonate" alkalinity rather than "total alkalinity" as established by the APSP, making it even more restrictive. Also the pH is limited to a maximum of 7.6 instead of 7.8, and cyanuric acid is limited to 50 ppm instead of the maximum of 100 ppm.

So why has the NPC narrowed the chemistry parameters to a point where it is nearly impossible to maintain pool water within that standard, and to never allow for a negative SI? This especially coming from a trade association that stonewalls establishing standards for their own product... be it water:cement ratios, calcium chloride content, incompatible admixtures, etc. etc.

Consider this: NPC consultants are often called in to inspect a pool when a plastering job has developed some plaster problems, and the pool customer is complaining about it. The focus will likely be on water balance, and not on possible improper plastering workmanship issues.

Often, a water pool test (and also a tap water test) is performed and compared only with APSP's National "Ideal" water balance standard as the required parameters to maintain, completely disregarding APSP's "minimum and maximum" guidelines. If any water balance parameter is found to be outside the "Ideal" range, then consultants have been known to suggest that the "improper" water balance must have led to the plaster problem.

And in a stark contradiction, following the NPC's official chemical startup procedure likely results in making new pool water aggressive (from -0.2 to -0.6 LSI according to their Start-up Card) during the first few weeks after initial fill... the most vulnerable time period for new plaster. This puts service techs in an awkward position.

More and more, it has come to our attention that pool plaster inspectors are (incorrectly) associating aggressive water (which, to them, means any negative SI, or any single low parameter) with plaster defects such as gray mottling discoloration, white streaking, soft spots, spalling or flaking, craze cracking, calcium nodules, delamination/bond failure, and even rebar rust stains. There are no plaster studies that support these claims. And this is not without consequence – pool owners and/or service techs are being made liable for replastering pools that the plastering company itself ruined!

Is it possible that the NPC adopted this new standard specifically to enable plaster consultants to blame "out-of-balance" water chemistry for various plaster defects, which then provides "cover" for their plastering members? Is this how the NPC "solves plaster issues?"

From: Kim Skinner [mailto:kimskinner@rfburst.com]
Sent: Wednesday, October 27, 2010 12:47 PM
Subject: Science VS Pointing Fingers

If you aren't aware, Mitch Brooks, the Executive Director of the National Plasterers Council (NPC), responded to our (onBalance) write-ups on "[Gray Mottling Discoloration](#)" by saying that the NPC disagrees with what we have written. We responded by asking him to specifically identify what they disagree with, and to state the NPC's official position on the causes of gray discoloration. Mitch then responded by saying that the NPC would not publicly debate this issue, and those interested would have to contact him directly to learn what they (NPC) disagree with. Mitch also stated that "the NPC solves issues....not point fingers which is what you guys (onBalance) love to do!"

For those of you who have been on the short end of the NPC's collective finger, or specifically the finger pointed by the NPC's Technical Director, Greg Garrett, that comment by Mr. Brooks sound pretty incredible. For those of you who are unaware of the type of finger pointing Mr. Garret engages in consider the following:

In April of 2001 Greg Garrett associated what he called "spot etching" and "highlighting" with aggressive water chemistry (pool in Phoenix AZ – see [oB-00004](#)). He also specified that there as no responsibility on the plasterer involved. The professional laboratory analysis then showed that the real culprit was the plastering company and its workmanship.

In August of 2003 Greg Garrett associated mottled white discoloration of colored plaster with aggressive water chemistry (pool in Tracy CA – see [oB-00005D](#)). He also specified that there was no responsibility on the plasterer involved. The professional laboratory analysis then showed that the real culprit was the plastering company and its workmanship.

In August of 2003 Greg Garrett also associated patterned white spotting of colored plaster with aggressive water chemistry (pool in Tracy CA – see [oB-00005M](#)). He also specified that there was no responsibility on the plasterer involved. The professional laboratory analysis then showed that the real culprit was the plastering company and its workmanship.

In December of 1994 Greg Garrett associated spot etching with aggressive water chemistry (pool in Phoenix AZ – see [oB-00019](#)). He also specified that there was no responsibility on the plasterer involved. The professional laboratory analysis then showed that the real culprit was the plastering company workmanship.

In August of 2007 Greg Garrett associated "etching, highlighting, and associated discoloration" with aggressive water chemistry (pool in Highland CA – see [oB-00040](#)). He also specified that there was no evidence of improper workmanship on the part of the plasterer involved... even though the plaster had delamination and cracking though which the gunite could be seen beneath, and the plaster subsequently began to literally fall of the side of the pool! The professional laboratory analysis showed that there was no evidence of any etching. Of course the real problem – massive delamination – was indeed a result of substandard workmanship on the part of the plastering company

In September of 2009 Greg Garrett associated mottling discoloration with aggressive water chemistry (pool in Tarzana CA – see [oB-00044](#)). He also specified that there was no responsibility on the plasterer involved. The professional laboratory analysis then showed that the real culprit was the plastering company and its workmanship.

Mr. Garrett is making a cottage industry of visiting pools and blaming water chemistry when the actual causes are known mixing, placement and curing defects documented in conventional cement/concrete science. We have many more reports written by Mr. Garrett that are along the same lines.

Keep in mind that this isn't just a pattern of making incorrect assessments – these are real pools where real pool owners and/or service techs were put at risk for paying to replaster pools when the fault lay with the plastering contractor.

We understand that Mr. Garrett, as well as onBalance partners, specifically visit pools where the whole point is to make a determination as to causation and responsibility. But it has always been our understanding that such determinations should be based on fact and science, rather than apologetics.

Feel free to click on the links and see the comparison between onBalance determinations and Mr. Garrett's. We hope these examples illustrate the absurdity of Mr. Brooks' claim that it is onBalance that is "pointing fingers."

CONTINUING EDUCATION FUND APPLICATION

Member Name: _____ Date _____

Company Name: _____

Address: _____

City: _____ Zip: _____

Course/Seminar/Program: _____

Course/Seminar/Program Date: _____ Cost: \$ _____

Note: The Education Committee Chairperson (ECC) must receive Application within 30 days of course Completion. Receipt or proof of attendance must be submitted to ECC before reimbursement will be made. Give/mail to Education Committee Chair – Brian Davis 8070 La Jolla Shores Dr. #421 La Jolla, CA 92037
